Signing documents digitally

Unlimited Multi-signature solution at the tip of your finger rather than the tip of your pen.

It is now possible to digitally sign any document processed through **ScannerVision™** server. Thanks to the new digital signature module, any process created by **ScannerVision™** can be easily completed by including a digital signature as well as a timestamp issued by an authorized entity.

The digital signature allows users to sign any processed document (only PDF output). Documents can be signed with the digital signature provided by the administrator. Each template created in **ScannerVision™** can use its own signature, turning **ScannerVision™** into a powerful multi-signature tool. We can have unlimited signatures and timestamping.

Unlimited signatures

There are no limitations on the number of documents that can be signed by our new module. You can capture and sign as many documents as you want from any source, whether it's a shared folder, a multifunctional device or a mobile device using **aivika Capture Pro**.

Multi-signature solution

Don't settle for a single signature. In **ScannerVision™** we make things flexible, each template you generate can have its own digital signature. You can work with different customer profiles, each with their own signed documents without restrictions.

Main advantages of using digital signature with ScannerVision™

Cost Savings

One of the biggest costs of any company is the requirement to keep paper documents, for compliance and other regulatory requirements. The obligation to keep paper leads to expenses in archiving, consumables for the printing, etc... With the tools available now, you can sign your documents digitally, reducing the costs associated with paper and archive preservation.

Improved Efficiency

For any company, process effectiveness is an essential aspect to keep costs down and be more competitive. By signing documents digitally we manage to increase the efficiency of these processes, avoiding unnecessary steps in the life cycle of the document and its data contained.

Improved Security

With the signature and timestamping, we can guarantee the integrity of the documents generated by **ScannerVision™**, helping organizations in meeting and exceeding compliance, regulations and standards.

PDF Signature Option

Navigation Tip: Double click icons with orange circles and single click cons without.
